

Accessible EPC Data

Fast, flexible access to property-level EPC data via API or Flat-File delivery & matching by Title Number, Address, UPRN or UDPRN

Accessible EPC Data from WhenFresh

As well as being a **regulatory requirement** in some sectors, the **EPC** data for any individual property (or a full mortgage book, for example) can be a key indicator to current and future risk, condition and value. EPC data is also important in the context of ESG and sustainability.

WhenFresh, the UK's Residential Property Bureau, now provides **fast, flexible access** to current and potential EPC data with supporting carbon output and energy usage data, at individual property level - all sourced direct from the Government's **Department for Levelling Up, Housing & Communities (DLUHC)**.

Data Matching & Delivery Options

EPC data can be supplied for any UK residential property where a certificate has been issued, by matching to any of the following:

- > **Property address**
- > **Title deed number**
- > **UPRN**
- > **UDPRN**

Data can either be accessed in real time via the WhenFresh **API**, or **appended to a flat-file** supplied by the client, with fast turnaround.

Additional Data Options

As the UK's Residential Property Data Bureau, WhenFresh brings together over 200 best-in-class proprietary, private & public property datasets in one place. While accessing EPC data, customers often take additional property attribute, environmental, risk/peril, geospatial, climate, market, transactional or other data items. See www.whenfresh.com/api or call us on **020 7993 5818** to discuss.

Example EPC Data Output

EPC data outputs are typically supplied as follows:

Title Number
Address 1
Address 2
Address 3
City
County
Postcode
Energy Performance Certificate Number
Energy Performance Certificate Expiration Date
Energy Performance Certificate Expired Date
Current Energy Performance Certificate Rating
Potential Energy Performance Certificate Rating
Current CO ₂ Emissions (tonnes per year)
Current CO ₂ Emissions (tonnes per year per m ²)
Potential CO ₂ Emissions (tonnes per year)
Electricity Tariff
Current Heating Cost (£ per year)
Current Hot Water Cost (£ per year)
Current Lighting Cost (£ per year)
Potential Heating Cost (£ per year)
Potential Hot Water Cost (£ per year)
Potential Lighting Cost (£ per year)

NB: If data is matched by Title number, the property address is supplied with the output, and vice versa.

About WhenFresh

WhenFresh is a PriceHubble company and is the UK's Residential Property Data Bureau, providing best-in-class data and data-driven solutions to Mortgage Lenders, Insurers, Local Authorities, Utilities, the Bank of England and other Big Data users.
